Viren Khatri

Pune, Maharashtra | LinkedIn | Github | +919850054844 | vk102002@gmail.com

Software Engineer with 2+ years of experience building scalable full-stack applications and distributed systems. Proficient in designing low-latency backend services, REST APIs, and modern frontend architectures using React and Next.js. Experienced in system design, concurrency, and high-throughput systems, with exposure to AI-driven workflows and semantic search.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Frontend: React, Next.js, Zustand, TailwindCSS, HTML5, CSS, TanStack
Databases & Caching: PostgreSQL, MongoDB, Redis, Firebase
Backend & APIs: Node.js, Express.js, Mastra, REST API Design, Webhooks, SSE
AI Systems: RAG pipelines, Vector Search, Semantic Retrieval, Multi-Agent Systems, Vercel AI SDK, LangChain
Infrastructure: AWS (EC2, S3, SQS, SNS, SES), GCP, Docker, NGINX, CI/CD, Railway, GitHub Actions

WORK EXPERIENCE

WorqHat (Winlysis Private Limited) Pune, Maharashtra
Co-Founder & Chief Technology Officer (CTO) *January 2025 – February 2026*

- Developed and scaled a multi-tenant SaaS platform integrating database, workflow automation, UI builder, and external portals, supporting high-concurrency workloads.
- Delivered a drag-and-drop UI builder and external portal system (white-labeling, auth, scoped access), reducing customer app delivery time from ~4–6 weeks to ~1–2 days.
- Transformed the node-based workflow builder into a production-grade distributed workflow engine with 40+ nodes and event-driven triggers, achieving 99.9% reliability and ~100K+ executions/day per tenant.
- Architected and optimized a React-based frontend system for a drag-and-drop UI builder, enabling dynamic component composition and improving rendering performance.
- Played a key role in building SmartMocks (AI Interview Platform), a core sub-product under WorqHat, contributing to the majority of its architecture and backend systems:
  - Architected a distributed asynchronous processing pipeline supporting 1000+ concurrent users and processing 6K+ jobs/hour with 99.9% reliability.
  - Implemented queue-based job orchestration using message queues (retries, dead-letter queues, concurrency control) for fault-tolerant processing.
  - Developed scalable backend services and APIs for high-throughput workloads and real-time processing.
  - Integrated LLM-based evaluation pipelines for automated feedback, reducing manual review effort by 85%.
- Led and mentored 5+ junior engineers through architecture reviews, sprint planning, and code reviews; set engineering standards and unblocked delivery across teams.

Full Stack Development Intern *January 2024 – December 2024*

- Conceptualized and implemented a drag-and-drop no-code system for backend development, slashing development time by 40% and empowering non-technical users to create backends efficiently
- Engineered a platform to handle RFQs, POs, deliveries, items, and financial data, amplifying data management and analysis capabilities by 30%

PROJECTS

Flora Care — AI-Powered Hydroponic System (MethodsX Publication) (Link) *June 2025*

- Built an end-to-end IoT-based hydroponic system using ESP32 sensors (TDS, pH, temperature, light) with an MQTT pipeline (EMQX) and Express.js backend for real-time data ingestion and control.
- Designed a scalable real-time data architecture using Firebase DB and a Next.js dashboard for live monitoring, alerts, and remote system management.

EDUCATION

MIT World Peace University Pune, Maharashtra
B.Tech Computer Science and Engineering CGPA: 9.21 *May 2025*
